HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the elected invention (claims 18-33) requires an assay mixture comprising, among other components, nucleic acid templates comprising a *glyQS* leader, RNA polymerase, and uncharged tRNA. Independent claim 18 also requires dinucleotides corresponding to the transcription start site of the leader, whereas independent claim 30 requires *in vitro* halted-complex bacterial transcription systems. These latter components would not inherently be found in, for example, a *Bacillus* cell lysate which would comprise the other components recited in claims 18 and 30. The only apparent reason to put together the components of either claim 18 or 30 together is to attempt to reconstitute an *in vitro* system of transcriptional anti-termination. One might have had a reason to put a *glyQS* template, RNA polymerase, tRNA and the other components together for the purpose of *in vitro* synthesizing the protein products of the *glyQS* genes, but in such a case one would have used charged tRNA (i.e. tRNA with the corresponding amino acids attached), not uncharged tRNA.

A model for bacterial T-box regulated transcriptional anti-termination involving uncharged tRNA was known in the prior art. Thus, one might have had a reason to put the components of the claimed mixtures together in an attempt to reconstitute the system *in vitro*. However, this is clearly an "obvious to try" situation which does not carry a sufficient reasonable expectation of success to support a rejection under 35 U.S.C. 103. Furthermore, there is documented failure of others to observe the anti-termination mediated by uncharged tRNA *in vitro* (Grundy et al (2002) Nucleic Acids

Research 30:1646-55, prior art of record, at page 1653 "Transcription *in vitro*"; Luo et al (1998) Nucleic Acids Research 26:5379-87, at pages 5386-87 "Conclusion"). Luo explicitly states:

"Despite several attempts, we could not reproducibly demonstrate a direct interaction between the *thrS* leader and the rRNA^{Thr}_{GGU} isoacceptor. This was not entirely unexpected since uncharged tRNA^{Thr}_{GGU} alone is insufficient to promote increased termination read-through in an *in vitro* transcription system...The interaction with the tRNA alone is apparently not sufficient to fold the leader mRNA into a higher order structure which might well occur *in vivo*. The identification of other factors involved in this complex regulatory mechanism is needed to attribute a more precise function to the different structural elements."

Grundy states:

"With a wild-type leader construct, ~50% of the transcripts terminated at the leader region terminator (Fig. 3). Addition of NusA increased termination efficiency; a similar effect has been observed for NusA in *E. coli* transcription termination assay systems (16). Addition of *E. coli* tRNA^{Tyr} (Type II; Sigma) failed to stimulate readthrough of the terminator, in the presence or absence of NusA."

It is noted that neither of the above references taught dinucleotides or halted complexes, or divalent magnesium cations, or *glyQS*, among other claim limitations. Hence, these references are not anticipatory. Furthermore, given the failure to observe tRNA-mediated anti-termination, the references undermine any reasonable expectation of success that the claimed mixtures would function. It is further noted for the record

Art Unit: 1637

that the Grundy reference does not evidence that NusA is an essential element, since transcription termination was observed, even in its absence.

Election/Restrictions

Claims 18-33 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 1-16, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 02/28/2006 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1637

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
